Bangalore, Karnataka — **Open to Relocation**

SUMMARY

Motivated Computer Science student with hands-on experience in building web apps, AI chatbots. Known for fast learning, problem solving, and delivering clean, functional solutions. Passionate about turning ideas into working products that make an impact.

SKILLS

Programming Languages: Python • Java • C • JavaScript • HTML • CSS

Backend Development: FastAPI • Django • REST APIs • WebSockets • Socket.IO • Real-Time Systems • API Design

Frontend Development: Responsive UI Design • HTML • CSS • JavaScript

Machine Learning & AI: Supervised Learning • Classification • Regression • Model Integration • Image Processing • Computer Vision

Deep Learning: CNNs • TensorFlow/Keras • Medical Image Analysis • AI Model Serving

Databases & Storage: MySQL • SQLite • Supabase

Tools & Platforms: Git • VS Code • Linux • Postman • NetBeans

Soft Skills: Problem Solving • Analytical Thinking • Fast Learner • Collaboration • Adaptability • Attention to Detail

EDUCATION

Amrita Vishwa Vidyapeetham — GPA: 7/10

B.Tech in Computer Science Engineering

Bangalore, KA

May 2022 – June 2026

SR College — GPA: 8.7/10

Maths, Physics, Chemistry

Warangal, TG

May 2020 – April 2022

PROJECTS

Healthcare AI - Dental Assessment Chatbot | [Node.js, Supabase, Llama 3.2B API, Computer Vision, CSS] | GitHub

- Developed an AI-driven dental assessment platform that combines user inputs and intraoral images to provide preliminary condition assessments using an LLM-powered chatbot.
- Integrated appointment booking and patient history management backed by Supabase, enabling end-to-end workflow from triage to follow-up in a single web application.

Full-Stack - Web Chat Application with Live Performance Metrics | [Node.js, Socket.IO, WebSockets, JavaScript] | GitHub

- Built a modular real-time chat platform using WebSockets to support low-latency, synchronized messaging between multiple clients.
- Implemented a live monitoring dashboard to visualize average latency, P95 latency, uptime, and message throughput, improving observability and performance troubleshooting.

AI-Powered - Smart Farming Assistant | [Python, FastAPI, TensorFlow/Keras, scikit-learn, JavaScript]

- Developed an end-to-end AI-powered farming assistant using FastAPI to serve machine learning and computer vision models for crop recommendation, plant disease detection, fertilizer guidance, and real-time weather insights.
- Implemented a Random Forest model (99.5%) for crop suitability prediction and CNN-based leaf disease classification using TensorFlow/Keras and scikit-learn.
- Designed a responsive, user-friendly frontend using JavaScript, HTML, and CSS that supports image uploads, soil and climate inputs, and clear visualization of AI-driven recommendations.
